① The maximum input voltage is the upper limit of the DC voltage. Any higher input DC voltage would probably damage the inverter
 ② Input voltage exceeding the MPPT voltage range may trigger inverter protection
 ③ The AC frequency range may vary from different country codes
 ④ Test conditions: 25°C, 100% depth of discharge (DoD), 0.2C charge & discharge
 ⑤ System usable energy may vary with inverter different settings
 ⑥ Discharge: In case of the battery cell's temperature range of -20°C~10°C and 45°C~53 °C, the discharge current will be reduced; Charge: In case of the battery cell's temperature range of 0°C~25°C and 45°C~53°C, the charge current will be reduced. Product charge or discharge power depends on the actual temperature of the battery pack
